

Soil Tunnel Set Up Instructions

*Note this will take 1-3 people

1. First unhook the cart the tunnel is on from inside the trailer and roll it down the ramp near the location you wish to set it up.

2. Next, take the soil tunnel out of the blue bag and sit on the ground where you wish to inflate it.

3. Unroll the soil tunnel where you wish to have it set up. *Make sure the long tree roots are where you wish people to **enter**.*

4. Once the soil tunnel is completely unrolled, plug the blower in to a power source and secure the “arm” on the tunnel to the blower before turning it on.

5. Turn the blower on and allow the soil tunnel to inflate. It does not require any assistance in inflating. *Make sure the outside zippers are closed while inflating.*

6. After the tunnel has completely inflated, open the zippers slightly to allow some air to escape. Then put all the outside banners on the soil tunnel. The inside banners should already be on.

7. Finally, place the plastic runners under the sides of the tunnel so that they don't scrape on the ground and secure the weights on the 4 corners of the tunnel to prevent wind damage.

Thank you for your cooperation and we hope that you enjoy your experience with the inflatable soil tunnel! If you have any further questions please call Delaware SWCD at (740) 368-1921.
